

“Upgrade your R programming skills for modern clinical trials”

The R Revolution: Analytics for Modern Clinical Trials

What makes R
the ultimate tool
for clinical trial
analytics?
Let's unravel the
mystery!

How can you make data talk? R holds the answer—do you?

Can a single script simplify complex clinical workflows? Let's find out!

Can you transform messy data into powerful insights with a few commands?

**What makes R the ultimate tool for clinical trial analytics?
Let's unravel the mystery!**

Ever wondered how SQL fits inside R? Here's your chance to explore.

How does one tool unify trial design, analysis, and reporting?

Why PHARMA-STATS?

Before we dive into the contents, here's why PHARMA-STATS and our trainers stand out?

Experienced
Trainers You
Can Trust

Trusted by
Top Pharma
Companies

Excellence
That Stands
Out

Experienced Trainers You Can Trust: Our trainers have hands-on experience in biostatistics and clinical trial analytics. They understand the real-world challenges of the industry and bring practical knowledge to every session.

Excellence That Stands Out: Known for our high-quality training, we focus on bridging classroom learning with practical industry needs, ensuring you're ready to take on real-world projects confidently.

Trusted by Top Pharma Companies: PHARMA-STATS has worked with leading pharmaceutical organizations for customized tool development.

Modules: Journey of Basic to Advance

This program takes you on a journey from foundational R programming to advanced clinical trial analytics. Each step is designed to deliver practical knowledge, empowering you to confidently apply R in real-world scenarios.

1

Introduction to R and RStudio

3

Importing and Exporting Data

5

String Manipulation

2

Understanding Data Structures in R

4

Data Manipulation

6

Implementing Logging

7

SQL Data Manipulation

9

Statistical Analysis and Hypothesis Testing

11

Generating Tables, Listings, and Figures

8

Data Visualization

10

Survival Analysis

12

Basics of Biostatistics

Advanced Features for Clinical Trial Programmers

1

End-to-End Clinical Reporting:

Learn to create dynamic reports that integrate Tables, Listings, and Figures (TLFs) tailored for clinical trial submissions.

2

Survival Analysis Expertise:

Get hands-on with Kaplan-Meier curves, Cox proportional hazards models, and log-rank tests, essential for analyzing time-to-event data in clinical trials.

3

Efficient Data Handling:

Tackle large datasets efficiently with advanced manipulation tools using various packages.

4

Statistical Analysis:

Gain the knowledge of p-value, hypothesis testing, and inferential statistics to support complex trial designs.

Let's get started!

DURATION:

3 MONTHS, OFFLINE, WEEKEND BASED
